

Artificial Intelligence

With Python

What is Artificial Intelligence (AI)?

According to the father of Artificial Intelligence, John McCarthy

→ *“The science and engineering of making intelligent machines, especially intelligent computer programs”.*

- Artificial Intelligence is the ability to design intelligent machines or to develop self-learning software applications that imitate the traits of the human mind like reasoning, problem-solving, planning, optimal decision-making, sensory perceptions, etc.
- Artificial Intelligence is a way of **making a computer, a computer-controlled robot, or a software think intelligently**, in the similar manner the intelligent humans think.

Around Us

Examples:-

Chatbots such as ChatGPT, GPT-4, Claude, etc.

Personalized recommendations on streaming services like Netflix,

Spotify, YouTube, etc.

Voice assistants like Siri, Alexa, and Google Assistant

Fraud detection in banking and finance

Social media algorithms that curate your feed

Spam filters in email

Predictive text on your smartphone keyboard

Smart home systems that adjust to your preferences

Virtual personal shopping assistants

Medical diagnosis and treatment planning

Why you should learn
